

How to: Navigate Manufacturing Security Challenges with Ease

Heightened Risk of Data Breaches

Adhering to Industry Regulations and Standards

Securing Supply Chain and Vendor Collaboration

Strengthen Manufacturing Security, Stay Ahead of Cyber Threats

Okta's Customer Identity Cloud (CIC) and Workforce Identity Cloud (WIC) offer a versatile suite of features to enhance security and user experiences across manufacturing operations, supporting employees and partners alike.

Simple, Secure Login

Universal Login: Customize login experiences that reflect your brand, ensuring quick recognition and trust across your manufacturing platforms.

Single Sign On (SSO): Streamline access across critical manufacturing applications through unified authorization, enhancing security and efficiency.

Multifactor Authentication (MFA): Eliminate the vulnerabilities that come with traditional credentials (e.g., username/password). MFA enables an intuitive login process that stops potential hackers in their tracks.

Passwordless: For organizations ready to take their authentication to the next level, implement biometric login options for a secure, efficient authentication experience in manufacturing environments.

Account Linking: Empower your employees and partners by enabling them to link accounts and access resources across multiple platforms, unifying their access and operations.

Identity-powered functionality

Universal Directory: Integrate every part of your technology stack into a single source of truth, creating one unified point of management that allows you to keep security policies consistent across manufacturing systems.

Progressive Profiling: Securely gather and manage detailed insights over time, enabling tailored user experiences within your manufacturing operations.

Lifecycle Management: Automate provisioning and deprovisioning to reduce human error and save time within manufacturing systems.

Privileged Access: Protect sensitive resources with a cloud-based security infrastructure that ensures appropriately restricted access without tying access to your organization's physical premises.

Workflows: Boost productivity and efficiency with 7,000+ pre-built integrations that provide no-code and low-code means of automating common administrative functions.
